

Custom Passive Tunable Longwave Antenna

Code: A-LOOP-LWT155-500

Description:

A high performance Passive Loop Antenna for the Longwave Band designed for LW Enthusiasts. Amateurs, Aero Enthusiasts and Longwave Listener's can tune broadcasts and signals below the AM band with ease! High Sensitivity and High-Q provide sharp tuning; make it ideal for Beacon hunting, direction finding and DX'ing, provided of course that your radio uses a Ferrite Rod on Longwave.

Ideal for portable operation or tabletop use, it's compact and great for field trips and listening where you can't setup a long-wire or have an otherwise large antenna. Hear signals that you've never heard before, increase your stations logged and the quality and enjoyment of your listening experience!

Specifications:

- Frequency coverage – Longwave Band from 155 to 500 KHz in two bands
- Dimensions - 38cm Diameter Antenna
- Proudly designed and manufactured in Australia.

Operation:

1. Tune your radio to the desired LW station or frequency
2. Place the Loop Antenna close beside or behind the radio
3. Choose the appropriate Loop Antenna frequency range with the toggle switch.
4. Tune the dial on the Loop Antenna for the strongest signal.
5. Experiment with proximity and position of the Loop Antenna and the radio for best reception.

Please enjoy using your new PK's Loop Antennas Longwave Loop!

Regards

Paul Karlstrand
